TO WORRY ABOUT

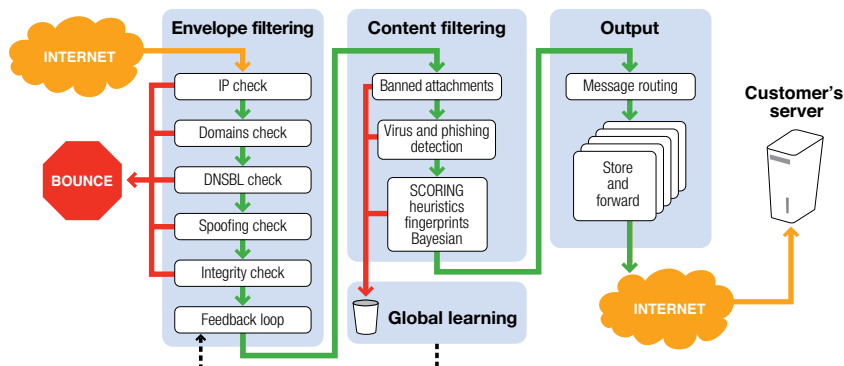

Today there are many ways to deal with spam, viruses, worms and phishing. But there's only one sure way to keep it from affecting your organization — **by preventing it from entering your network perimeter** in the first place.

Prevention of this sort takes a unique approach. It takes ZEROSPAM's Managed Email Security Service. That's because ZEROSPAM protects your gateway against harmful email content by filtering its flow **BEFORE** it reaches your servers.

ZEROSPAM is a **Canadian company** dedicated to innovative email solutions. Our team of **email experts** has spent more than 18 months perfecting ZEROSPAM's multi-layered architecture. It is based primarily on open source software and incorporates **15 filtering layers** to produce a **detection rate of more than 96%**. This multi-layered approach represents the best filtering efficiency guarantee. The only commercial component of ZEROSPAM's filtering architecture is **Cloudmark's message fingerprinting™** layer. Genotype analysis has proven to be the single most effective tool in the fight against image spam. **Its efficiency against this new form of spam is exceptional.** Cloudmark's fingerprinting algorithm allows its system to identify and thwart new threats in real time. ZEROSPAM is also highly effective in permitting the email you want. Thanks to our superior accuracy, the ZEROSPAM solution has an **extremely low false positive rate**. The system provides administrators access to Web-based management tools in addition to weekly statistical reports.

ZEROSPAM is the fastest IT solution you will ever implement. A simple DNS update to your MX records redirects your email to our multiple, redundant filtering servers located in secured data centers. In a few milliseconds, emails are filtered by ZEROSPAM's own multi-layered scanning engine - removing spam, viruses, worms, executable files, phishing attempts and other harmful content. A purified email flow is then routed to your inbound mail server. There's **no need for staff training, no installation required, no hardware upgrades – no capital expenditure**. ZEROSPAM is a scalable solution. The service fee is based on the number of email addresses linked to the protected domain. Small organizations can afford this high-end solution, while large government agencies enjoy the advantage of paying the lowest rate per address.

 Canadian based, owned and operated.

ZEROSPAM is managed by messaging infrastructure experts and supervised by **CISSP® certified professionals**. Security is managed according to ISO17799 guidelines. Administrators undergo a thorough background check before joining the ZEROSPAM team, follow a strict code of ethics and sign a confidentiality agreement. ZEROSPAM's customer support service is quick, personal, reliable and highly professional. Hundreds of organizations, including **large private corporations, law firms and government agencies** have entrusted ZEROSPAM with their **email security**.

Email traffic is routed to our network of redundant fail-over filters housed in high security data centers. These centers are all located in Europe and Canada — **exempt from the U.S. Patriot Act**. Because ZEROSPAM is completely **network based**, it keeps client IT infrastructures clean while **taking a load off bandwidth and gateway resources**. A high availability, redundant architecture offers continuous service and provides message queuing, should the client server become unavailable. With firewall rules, incoming mail can be restricted to ZEROSPAM servers, providing **excellent protection** against **DOS or DDOS attacks** as well as **DSN Backscatter**. The **antivirus engine** provides an effective first line of defense against malware. For added security, encryption protocols such as PGP and TLS are fully supported.

Benefits

- ➔ Keeps your network perimeter clean
- ➔ Immediate implementation
- ➔ High availability, redundant architecture
- ➔ Frees IT resources from spam management
- ➔ Significant bandwidth usage reduction
- ➔ No capital expenditure
- ➔ Protection from obsolescence
- ➔ Protection from Section 215 of the Patriot Act
- ➔ Real-time protection against phishing and image spam
- ➔ Managed by email experts
- ➔ Active queuing service if client server becomes unavailable
