

# ZEROSPAM + OFFICE 365

## THE COMBINED POWER OF 2 GREAT SOLUTIONS

Since its launch, Office 365 has proven to be a quick and easy way for organizations to migrate their email to the cloud. Using a professional email security solution on top of EOP (Exchange Online Protection) provides an additional layer of protection against today's advanced threats.

### THE BENEFITS OF ADDING A PROFESSIONAL CLOUD ANTI-SPAM TO OFFICE 365

## OFFICE 365

### RANSOMWARE PROTECTION

Good protection. Advanced Threat Protection only available with some subscriptions at an extra cost.

### PHISHING AND SPEAR PHISHING PROTECTION

Possible issues with recognition of phishing attempts in languages other than English. Spearphishing vulnerabilities.

### QUARANTINE MANAGEMENT

By default, each individual user has a junk folder. Users can transfer messages from the junk folder to their inbox. This enables them to click on dangerous links and open dangerous attachments which increases security risks for the organization.

### SPAM DIGESTS

Daily spam digests must be enabled globally for all Office 365 users.

### TECHNICAL SUPPORT AND CONFIGURATION

Support requests are answered promptly but configuration of the filters to optimize avoidance of false positives and false negatives mostly rests with the customer.

### SPAM CATCH RATE

No proven spam catch rate or FP rate. Unknown level of undetected spam. Superior spam detection requires special configuration.

## OFFICE 365

**ZEROSPAM** quarantines malware propagated through disguised executable files and infected macros in Microsoft Office documents and scans every link to offer top protection against all forms of email-propagated ransomware. The ZEROSPAM centralized quarantine further protects customers against their own users so dangerous quarantined messages won't be released.

Special anti-phishing layer specific to banks, social media sites, Paypal and eBay. Excellent recognition of phishing messages. Advanced spearphishing protection included in the standard service cost.

While individual quarantines are fully supported, the **ZEROSPAM** solution is based on self-subscription or manual creation of accounts for trusted users as opposed to automatic creation for everyone. This has proven to be safer, more productive and easier to manage for clients and resellers.

**ZEROSPAM** enables each user with an individual quarantine account to request a daily spam digest in their profile.

The **ZEROSPAM** default setting offers optimal detection. The solution is built to maintain this performance with little or no customer intervention. Technical support is agile, competent, responsive, thorough and fast and FP and FN issues can quickly be resolved.

**ZEROSPAM** has a proven catch rate of 99.9% and a very low FP rate. The performance of the solution is constantly validated by Virus Bulletin, a U.K.-based firm ranking email security vendors. This level of performance requires no special configuration.

**Deadly accurate, utterly simple cloud Anti-Spam**
